# THE MICROBIOLOGIST in INDUSTRY

## What inspired you to enter this career?
I was fascinated by biology when I was young – a little by what we did in biology at school but to be honest more by TV programmes on biology and medicine.

## A TYPICAL DAY IN THE LIFE OF AN INDUSTRIAL MICROBIOLOGIST

Flexitime is common – I can start any time between 8 and 9.30. I generally start at around 9.

**09.15:** Collect samples to test. These include for example the sterile water used to make the medicines which are the products of this company. Standard microbiological tests are carried out on these to investigate bacteria growing in inoculated agar over 5 days.

**10.30:** Endotoxin tests on medicines. These are chemicals produced by E. coli which would cause toxic shock if present in for example cancer drugs for leukaemics.

**11.00-11.20:** Coffee break

**11.30:** pH and conductivity tests on water samples collected earlier. Compilation of data into daily and monthly reports

**13.00:** Lunch

**13.30:** Tests on an antibiotic from a plant in Shannon. Spike cultures of target bacteria with different concentrations of the antibiotic and incubate. Use UV light to measure turbidity of cultures and therefore how many bacteria are present. Analysis of data to determine how much antibiotic should be in each tablet

**16.00-17.30:** Finish depending on start time and lunch break

**After work:** There is a social club which organises football, golf, basketball on a weekly basis. There are also barbecues and weekends away organised – we have a weekend in Madrid coming up!

## What are the highs and lows of your career so far?

### Highs
I love the fact that my career is developing. I have done training courses and moved job to achieve promotion

### Lows
Paperwork and the daily routine which can be monotonous.

## Are there opportunities to travel? Yes!!
Especially in America – lots of money and a shortage of scientists with experience but less holidays!

## What qualifications are involved?
I did a BSc in Science at UCD. Most people come in with a relevant degree or diploma. I specialised in Microbiology in the third and fourth year. One of the best things about this course was that it involved a work placement for 3 months. This put me at an advantage when I came to apply for jobs because I had industrial experience on my c.v. A large number of my classmates were offered their first job in the place they did their work placement so I realised what an advantage it was to choose a course which included work experience.

## What subjects do you recommend at Leaving Certificate?
Biology is obviously the most directly relevant but I found Chemistry at LC a huge advantage when I got to college.

## What qualities do you need to succeed?
An interest in microbiology, good powers of observation.
Determination to succeed – it requires dedication and hard work to get your

Questionnaire
- is Industrial Microbiology for YOU??

Circle the answer most like you!
1. When science programmes start on television I usually switch to another channel
   AGREE       NOT SURE       DISAGREE

2. I would like to travel and work abroad.
   AGREE       NOT SURE       DISAGREE

3. I get bored easily with repetitive tasks
   AGREE       NOT SURE       DISAGREE

4. I like working as part of a team
   AGREE       NOT SURE       DISAGREE

5. I am good at noticing things
   AGREE       NOT SURE       DISAGREE

6. I like a routine in my life
   AGREE       NOT SURE       DISAGREE
7. It is important to me to be doing something which is important to others

<table>
<thead>
<tr>
<th>AGREE</th>
<th>NOT SURE</th>
<th>DISAGREE</th>
</tr>
</thead>
</table>

8. I would not like the responsibility of doing something where people are endangered if I get it wrong

<table>
<thead>
<tr>
<th>AGREE</th>
<th>NOT SURE</th>
<th>DISAGREE</th>
</tr>
</thead>
</table>

9. I only work at subjects I am good at

<table>
<thead>
<tr>
<th>AGREE</th>
<th>NOT SURE</th>
<th>DISAGREE</th>
</tr>
</thead>
</table>

10. I don’t mind repetitive tasks as long as I can see their purpose

<table>
<thead>
<tr>
<th>AGREE</th>
<th>NOT SURE</th>
<th>DISAGREE</th>
</tr>
</thead>
</table>

**Scoring**

For questions 2,4,5,6,7,10  
AGREE = 3, DISAGREE = 1

For questions 1,3,8,9  
AGREE = 1, DISAGREE = 3
